-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ueno et al. (US 2002/0108702 A1) in view of Oshima (US 6,688,789 B2).

Ueno discloses a thermal transfer image receiving sheet comprising a substrate, a dye receptor layer on the substrate and a detection mark on the dye receptor layer [0245]. The detection mark comprises infrared absorbent [0248] and [0250]. Ueno does not disclose a detection mark that is used in the current invention. Oshima teaches the use of a detection mark substantially identical to the current invention (see at least Sample 13 in Fig. 12 of Oshima), wherein the detection mark inherently possesses the claimed electromagnetic radiation absorbing and electromagnetic radiation emitting value. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the detection mark of Oshima with the invention of Ueno so as to provide detection mark capable of exhibiting high response (col. 9, lines 57 of Oshima).

With respect to claims 6 and 7, the criticality of the claimed method of identification and image forming apparatus has not been provided in the current

Art Unit: 1774

specification, thus the method of identification and the image forming apparatus are conventional.
